CALIFORNIA CYBER ALLIANCE / FUNDER EXECUTIVE SUMMARY

Community Resource Access

CalCyber.org is seeking funding and community partners for a proposed local pilot that would help people experiencing homelessness or housing insecurity connect with shelter, food assistance, and health care.

What the investment would support

Build a mobile-friendly service directory and contact tools, onboard participating providers, train staff to maintain listings, and fund technical support, privacy safeguards, and evaluation. Community organizations would continue delivering their specialized services.

What the first pilot would test

Work with a defined group of providers in one service area. Confirm what information each provider can keep current and how staff can record referral outcomes. Offer assisted access through participating organizations for people who need help navigating services.

How progress would be measured

Set a baseline before launch and track elapsed time from a request to provider contact, the share of tracked referrals that result in a completed connection, and staff time spent coordinating referrals. Report aggregate results and describe any gaps in follow-up.

The invitation

Help fund, design, or host the first pilot. CalCyber.org would use the pilot findings to decide whether to expand to additional providers or services, including transportation, education, and job training.
